Education

NIT Delhi, New Delhi
B.Tech in Computer Science and Engineering

Graduating 2026
CGPA: 7.3/10

Ryan International School, Surat
Secondary Education

Completed 2022
Percentage: 90%

Experience

Tech Mahindra

May 2025 – Present

Apprentice (SDE Intern)

Tech Stack: Autonomous AI Agents, Agentforce, Apex, Lightning Flows, Salesforce CRM

- Built and deployed autonomous AI agents using Einstein Copilot and Agentforce to automate essential CRM operations with minimal human intervention.
- Automated 80% of case management workflows, including smart case creation, owner assignment, duplicate case detection, and CRM lookups — reducing manual effort and response time by an estimated 60%.
- Earned 2 Trailhead badges (Agentblazer Champion and Innovator) while building hands-on expertise in AI-enabled enterprise systems.

Healvibe

heal-vibe.com

A Freelance Full Stack Web Application

- Developed a comprehensive web application using Django, enabling dietitians to efficiently manage patient records, schedule appointments, and generate PDF reports for dietary plans, enhancing workflow efficiency and patient care.
- Hosted on Serv00 with CockroachDB, ensuring performance and scalability. Implemented Gunicorn and Apache for seamless HTTP request handling at heal-vibe.com

Skills

Languages: C, Python, Java

Frameworks: Django, Spring Boot, Java Swing, OpenCV, Salesforce Lightning Flows

Databases: MySQL, MongoDB, CockroachDB, Redis

Developer Tools: Git, GitHub, VS Code, IntelliJ IDEA, Cursor, Postman, Oracle VM VirtualBox

Coursework: Data Structures & Algorithms, Computer Networks, Operating Systems, DBMS

Projects

Django Expense Tracker with AI Chatbot

Self-Project — Tech Stack: Django, Python, Gemini API, Google OAuth

- Developed a full-stack expense tracker with secure Google OAuth authentication, supporting expense and budget management, receipt uploads, and data import/export (JSON, PDF, CSV, Excel).
- Integrated an AI chatbot using pattern-based NLP and Gemini API for natural language interactions to add, query, and analyze expenses.
- Deployed a responsive web app on Render with login/logout, real-time data sync, and seamless User experience.

AgentConnect

Tech Stack: n8n, Vapi.ai, Gemini API, Google Calendar API, Gmail API

- Designed and deployed a fully autonomous AI voice agent using n8n to schedule appointments via real-time phone conversations.
- Built a workflow with numerous n8n nodes, integrating Vapi.ai, Gemini for decision-making, and various APIs Keys for calendar and email automation.
- Enabled dynamic slot negotiation and availability checks with approximately 800ms response latency, achieving over 90% success rate in test calls.

Multilingual FAQ Translation API

[GitHub](#)

Tech Stack: Django, REST Framework, Google Translate API, Redis, PostgreSQL

- Developed a Django-based API that translates FAQs into multiple languages using Google Translate API.
- Implemented Redis caching to optimize performance by reducing redundant API calls.
- Designed RESTful endpoints for seamless integration and scalability.

Practice Projects:

- Demo Crypto-Currency trading Platform with RealTime Continuous Data Handling
- Hand Digit Recognition With MNIST dataset
- Optimized Time Series Forecasting with fbprophet
- URL Shortener/QR code generator
